How the brand was born

Why evaire? A complete platform

evaire is a complete NLP/ML enabled SaaS platform which combines retrospective and concurrent reviews in the same platform to provide a solution to payers and risk bearing providers. evaire was created to improve code capture for retrospective charts and improve documentation at the point of care with NLP/ML technology. Built by risk adjustment and coding experts, evaire takes clinical documentation for risk adjustment and makes it easier for coders and clinicians to review records and encounters faster.

CONCURRENT:

- EHR integrated technology
- Clinical documentation improvement at point of care
- Compare claims, suspects to CCDA data for better outcomes
- Integrated query process
- Utilize NLP and ML to improve code capture and documentation for HCC's

RETROSPECTIVE:

- Risk adjustment workflow utilizing NLP/ML to improve HCC code capture
- Gives transparency and flexibility for plans and providers to manage their initiatives and vendors.
- Chart and data repository
